

Lookahead-style interpolation: paired-seed CPT replication

A Target-domain math: fixed primary

B Retention: FineWeb: fixed primary

C Fixed controls: three-seed means

D Fixed controls: three-seed means

- Individual seed: document 95% interval
- ◆ Seed mean: 95% t interval (3 seeds, df 2)
- Fixed threshold: math +1 / retention -1

Prospective replication criteria: passed · SmoLLM2-135M · 20% replay · four target-data passes
Fixed primary: Lookahead 2048 vs ordinary 1376 updates (+49%); no compute-efficiency claim.
Separate from T³. Seed 0 excluded; fixed replication documents reused; interval assumptions in readout.
