

135M CPT: small, domain-dependent adaptation effects

Complete 56-case grid · four passes · external documents · one training seed

ADAMW 3e-06 ADAMW 1e-05 SGD 0.03 SGD 0.1

—●— Ordinary: base + 8 checkpoints ▲ Query gradient ○ 1 inner step
× Zero-adaptation endpoint ■ Mean support/query gradient ● 2 inner steps

Top: all 56 endpoints and ordinary trajectories. Bottom: all 32 effects, with marginal 95% paired-document intervals.
Exploratory, previously examined documents; no multiplicity adjustment or training-seed uncertainty.
