

135M CPT: adaptation adds little at the tested dose

Complete 56-case grid · four passes · development windows · one training seed

ADAMW 3e-06 ADAMW 1e-05 SGD 0.03 SGD 0.1

—●— Ordinary: base + 8 checkpoints ▲ Query-only ○ 1 inner step
× Own-zero endpoint ■ Retained-mean ● 2 inner steps

Top: all 56 endpoints; ordinary trajectories provide context. Bottom: all 32 own-zero endpoint effects.
No external scores or seed uncertainty. One vs two inner steps also changes displacement and compute.
