

SmolLM2-360M: does denser ordinary early stopping close the gap?

— LR 3e-06, replay .2 — LR 3e-05, replay .2 × Ordinary, no replay ◆ Original control
 — LR 1e-05, replay .2 — LR 0.0001, replay .2 ★ Fixed Lookahead K64 ▲ Strongest compatible control

68 added observations; all ordinary LR/replay controls retained. Lines join measured points only.
 One training seed; reused 512 + 512 documents. Pointwise document CIs are not selection-adjusted or seed intervals.
 Candidate 2048 updates vs strongest control 1568; this does not establish compute efficiency.
 Negative FineWeb change means improvement over base. Lookahead-style interpolation remains separate from T³.
